Ideathon Pitch Deck

6 SLIDES · KEEP IT SHARP

TEAM NAME	Baltic Technology
MEMBERS	Divya, Arpit, Ashish, Ayush,Aries
CAMPUS	Rishihood
PRODUCT NAME	Froggo
TRACK	Track A

01 · PROBLEM

What's broken?

Most people sign contracts they cannot read and only find the catch later.

PROBLEM IN ONE LINE

- Froggo turns dense legal contracts and T&Cs into plain-English summaries, flagging obligations, hidden risks and missing clauses.

Who faces it, how often?

- Students, freelancers, tenants and small business owners with no legal background
- They face contracts, rent agreements and app T&Cs often and miss loopholes that could work in their favour

How do they cope today?

- Pay an expensive legal advisor for every document
- Or sign unsupervised, without reading the fine print

Why does it matter now?

- Every app, job offer and rental now comes with a long agreement
- One missed clause can mean lost money, unfair penalties or lock-in
- LLMs can now read long documents and explain them simply

02 · USER

Who are you building for?

Students and first-time freelancers who sign contracts without expert help.

USER PERSONA

WHO	Student or first-time freelancer, 18-25
GOAL	Understand a contract before signing
PAIN	Legal jargon; lawyers cost too much
SUCCESS	Signs knowing the risks and terms

How do you know?

Our own experience as students signing internship offers, rent agreements and app T&Cs unread. We will validate with a short survey and 5 user interviews on campus.

Where will you find them?

NST campus Slack channels, student and freelancer communities, and hostel/PG groups. Then LinkedIn, X and a Product Hunt launch to reach our first 50 users.

03 · SOLUTION

What are you building?

From a wall of legal text to a clear answer in seconds.

SOLUTION IN ONE LINE

Froggo helps non-experts understand contracts and T&Cs by turning them into plain-English summaries with risk flags.

STEP 1

Upload or paste

The user drops in a contract, rent agreement or T&C and picks their role, such as tenant or freelancer.

STEP 2

Froggo analyses

AI extracts key obligations, fees, deadlines and penalties and flags risky, one-sided or missing clauses.

STEP 3

Plain-English result

A simple summary, a risk score and questions to ask or negotiate before signing.

04 · WHY AI

Why does this need AI?

AI reads, explains and flags what regular software cannot.

THE AI EDGE

What can AI do here that regular software can't?

AI reads long legal text in context, explains it simply and spots risky or missing clauses. Keyword search or forms cannot.

What goes in, what comes out?

In: PDF, photo or pasted text of a contract.
Out: plain-English summary, key terms, risk flags and questions to ask.

Which AI tools or models?

Replit Agent to build and deploy, an LLM API for analysis and summaries and OCR for scanned documents.

What if the AI gets it wrong?

Each flag links back to the original clause, with clear "not legal advice" notes and a prompt to consult a lawyer for high-stakes deals.

05 · 3-WEEK BUILD PLAN

How will you ship it?

One clear deliverable per week, live by the end of week 3.

WEEK 1

Foundation

Upload/paste flow and a basic AI summary of a contract, working on Replit.

WEEK 2

Build out

Risk and missing-clause detection, risk score and clause citations. First 10 users test it.

WEEK 3

Ship

Polish the UI, fix feedback, add disclaimers, deploy and launch publicly on Product Hunt.
